

Close Brothers

Close Brothers have been outstanding supporters since 2013. This past year was no exception and they raised an incredible £80,000! They fundraise throughout the year with a focus on their Charity Week and Grad CSR Challenge, where they take part in sports matches, silent auctions, cake sales, pub quizzes and much more. We're excited to continue working together in 2020/21 and hope to continue our partnership for many years to come. Thank you for the amazing support!

Charity Car

Charity Car is a car scrappage company that has been supporting Cancer Research UK since 2012 and has managed to raise over £80,000 to date. Members of the public donate their cars and choose which charity they'd like the scrappage value to go to. They recently chose us as their Charity Partner of the Month for February 2020 to coincide with our World Cancer Day campaign. Thanks to all of the hard work, Charity Car was able to donate over £11,000 last financial year to help us with our life-saving research.

Coinstar

Generous Coinstar customers across the UK have donated £1 million of their loose change to Cancer Research UK at Coinstar machines. Over a 19-year partnership with Coinstar, their donations, which passed the million mark at the beginning of March, are helping to fund research to beat cancer sooner and help more men, women and children survive.

Receiving the landmark gift from Coinstar on behalf of Cancer Research UK – demonstrated by a giant £1 million coin – was cancer

survivor Tina Angell, who herself has collected thousands of pounds for the charity since being diagnosed with bowel cancer in 2003.

Coinstar operates a network of nearly 2,000 machines located in supermarkets across the UK. Customers can take unsorted change to the machine where it is counted and converted into a voucher that can be exchanged for cash or used towards shopping. And thanks to Coinstar's 'Coins that Count Programme', consumers can choose to donate their coins directly to charity, resulting in the £1 million already raised for Cancer Research UK.
